
WATCHING
WHILE EATING
by Oliver

I cannot taste my meal.

If meal feels just like a task,
how can I refind the meaning & memory of it ?

** Based on a three-week experience*

Watching while eating
Is it BAD?

No, I can embrace it.
I want me to watch well and eat well at same time.
It is a combinaton of happiness.

First-Week Record

two strong influencements shown in my data:
*factors **before the meal** and factors **during the meal**.*
These two fators affect my feelings after the meal.

CHOOSING IDEAL VIDEO

Before the meal...

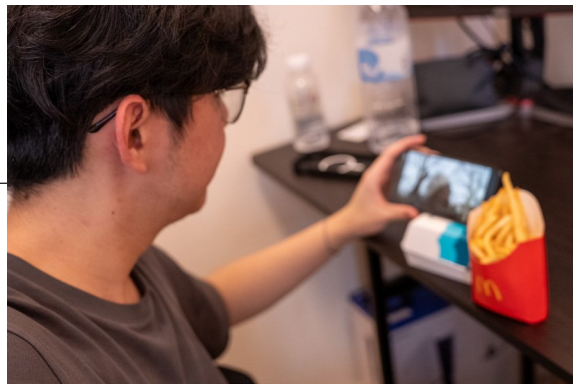

*There are **three** factors influence my attention.*

Alone
Along

go to shopping mall to eat individually

a normal Friday dinner

baba & mama's birthday

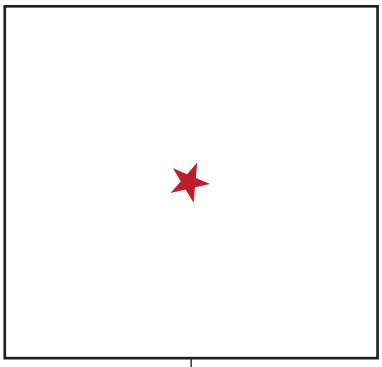

It affects me whether
eating with my phone (devices) or not.

Lonely

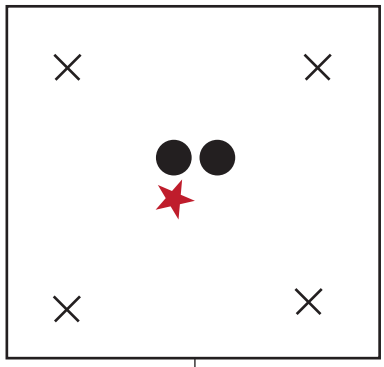

Whether I am...

top-down view

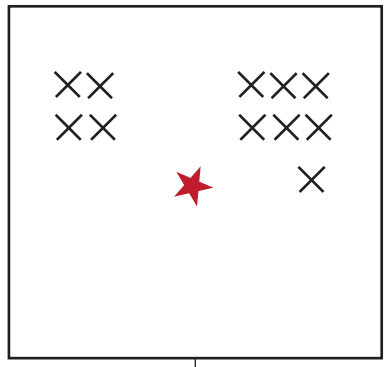

Alone

Along

Lonely

Me *Friend* *People Around*

My attention gets diverted to food and conversations with friends / family. Although my attention won't be entirely focused on food, the social aspect will be far less appealing than the video.

When discussing food, I focus entirely on the food itself.

Most common experience

Even though my attention is currently being diverted by the video, my overall attention span is smaller than when I'm commonly eating while watching videos.

This is the most suitable environment for me. Most of the time, I will choose to watch while eating.

Out of politeness and respect for my friend, I will not watch while eating.

The environment makes me uncomfortable. I'll definitely choose to eat while watching. I need someone/something to accompany me.

Full

"I need find a video
to distract my fullness"

Attraction Factors

Interest Factor

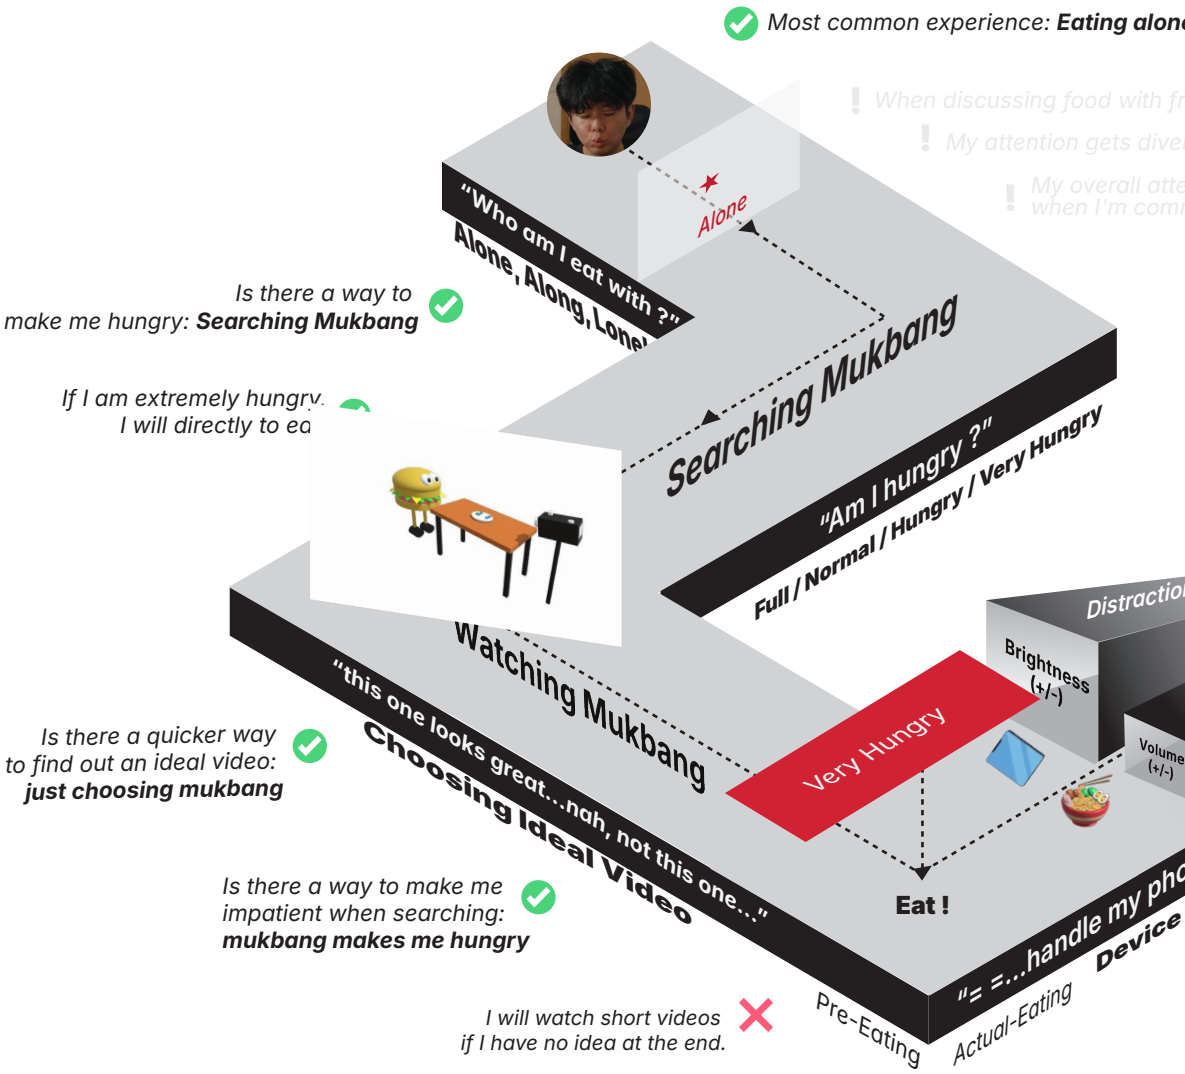

Stimulated

Mukbang revolve around "eating" and "food," which can evoke taste associations even when I'm not that hungry. Whether before or during a meal, the visuals and sounds continuously reinforce my focus on and craving for the food. Also, it is a proper type of video that has relatively weeker addiction and stronger interest for me.

Watching While Eating

e uses one device (phone) at different times

iends, I focus entirely on the food itself.
rted to food and conversations with friends...
ntion span is smaller than
monly eating while watching videos.

? *Is there a combination of settings combo that can make me less focus on the media?*

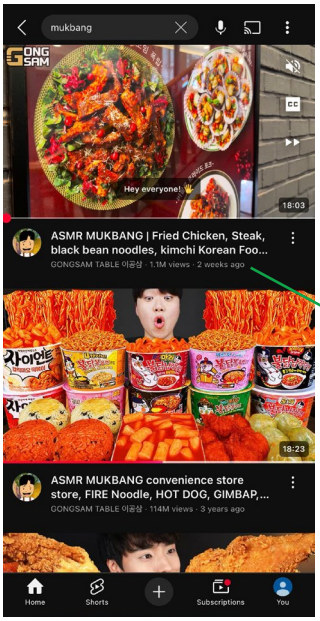

✕ *low attraction on device = more attention on food*:
proper attraction on device = proper attention on food

✓ *Is there a perfect media type can make me less focus, and I can also feel interested:* ***mukbang***

? *Is there a way that can seamlessly transition to the next video in this platform?*

✓ *Can I just use one device to control my attraction:*
Yes, using phone with shelf

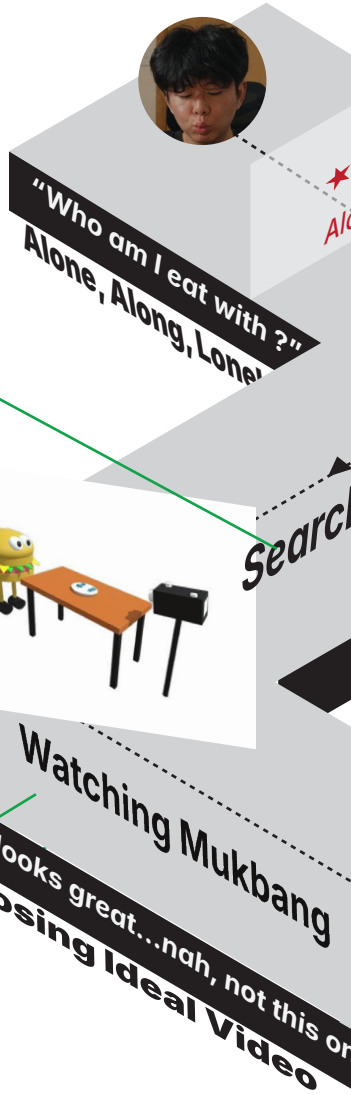

✕ *I will choose different devices at different times.*

When searching mukbang, it will make me extremely hungry, then I will quickly start to eat.

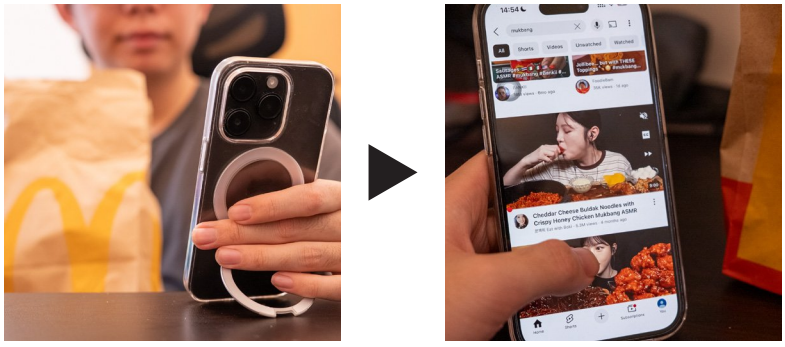

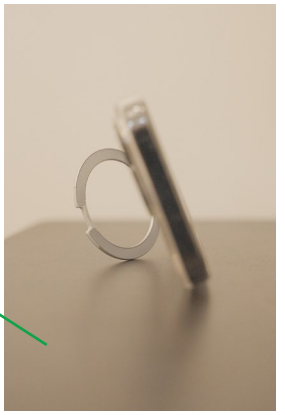

When watching mukbang while eating, I will be too hungry to watch the video, putting all my attention on the food.

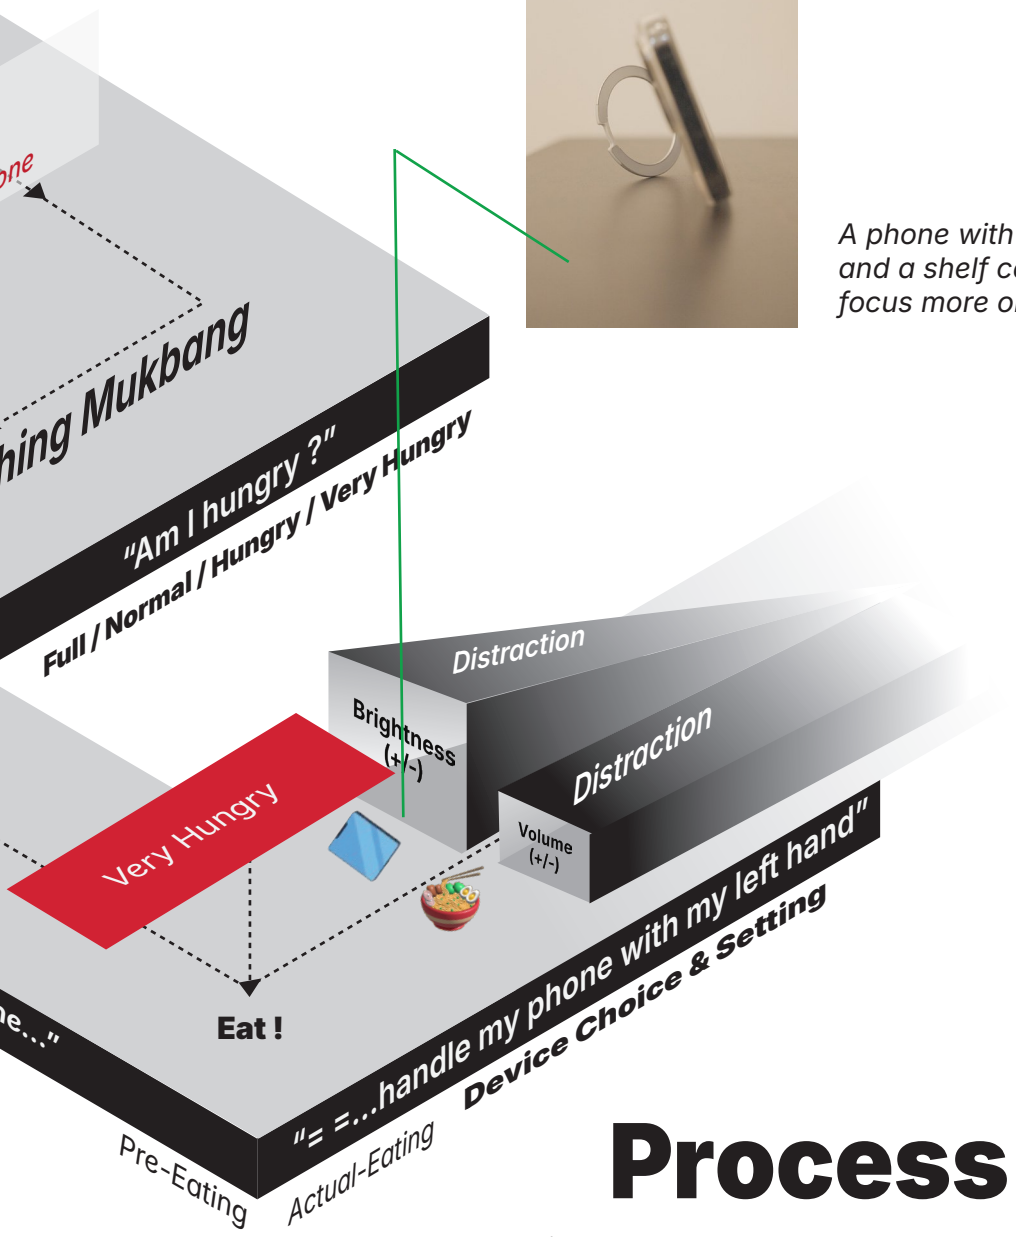

Pre-eating

Actual Eating

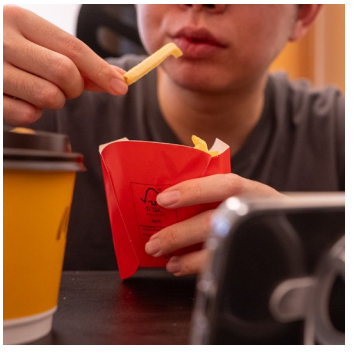

A phone with small screen and a shelf can make me focus more on food

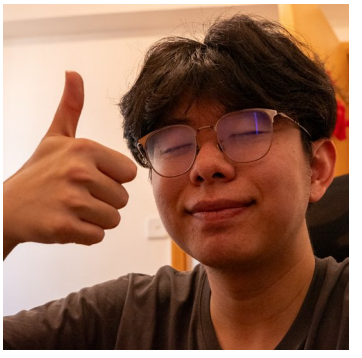

Process Plan

Actual Eating *Post Eating*

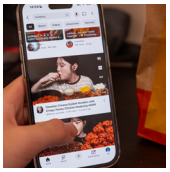

Test & Reflection

Based on the second & third week records
(25. Jan - 31. Jan) (1. Feb - 7. Feb)

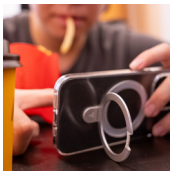

Messages & message

Problem: Messages

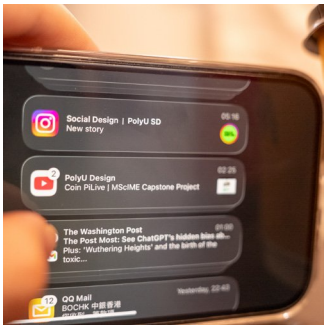

(Actual Process)

*! *There are messages disturbing me when I'm eating.*

*! *Mukbang has some attractions like the other videos*

Solution 1 - Different types of mukbang

Pre-Eating:
Mukbang 'delicious food'
makes me feel hungry
(so I will focus more on food)

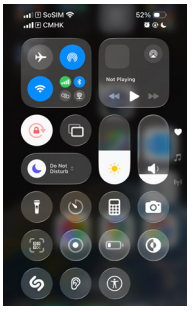

Actual-Eating:
Mukbang 'Big Eater Challenge'
makes me feel full
(so I will not frequently watch it)

Solution 2- Immersion Setting

? *Is there a combination of settings combo that can make me less focus on the media? (unsolved potential)*

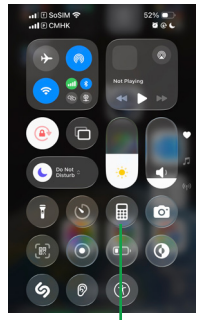

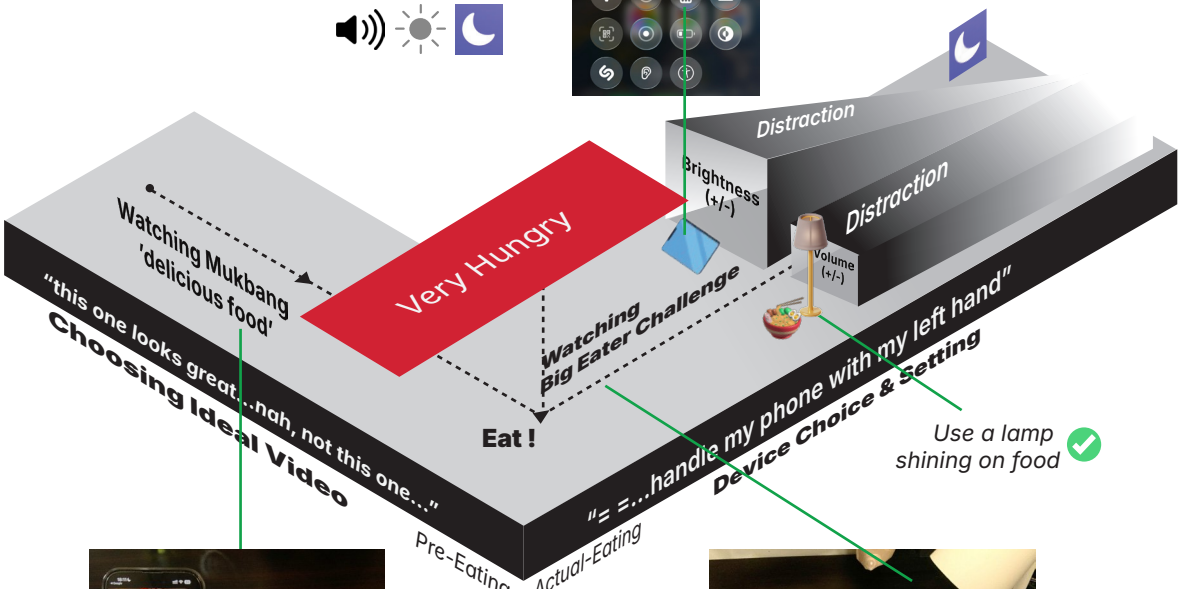

Dark: Audience / Popcorn (food)
Light: Movie (video)

Dark: video
Lamp Light: food

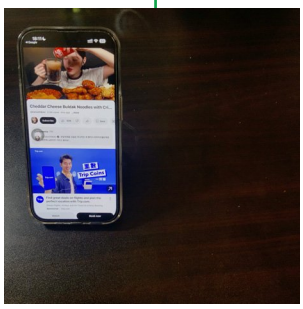

! Focus Mode: video
! Slightly lower brightness & volume

Is there a combination of settings combo that can make me less focus on the media:
lower suitable brightness & Volume + Focus Mode

Use a lamp shining on food

Mukbang 'delicious food'

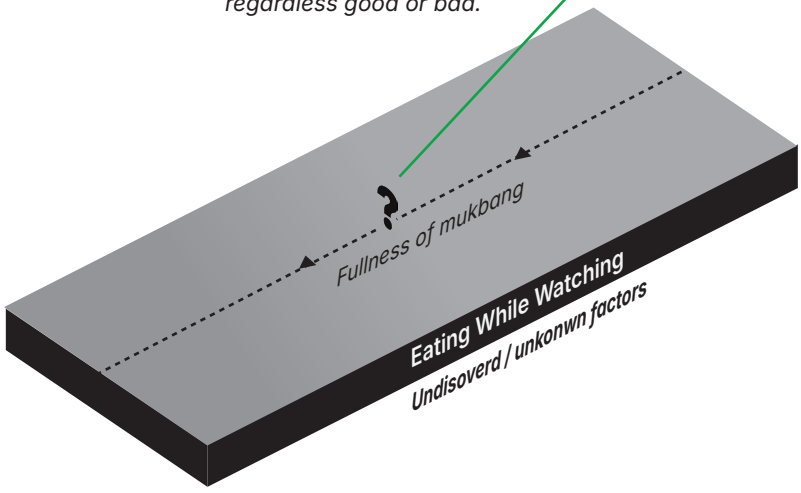

Search in portrait mode

View in landscape mode

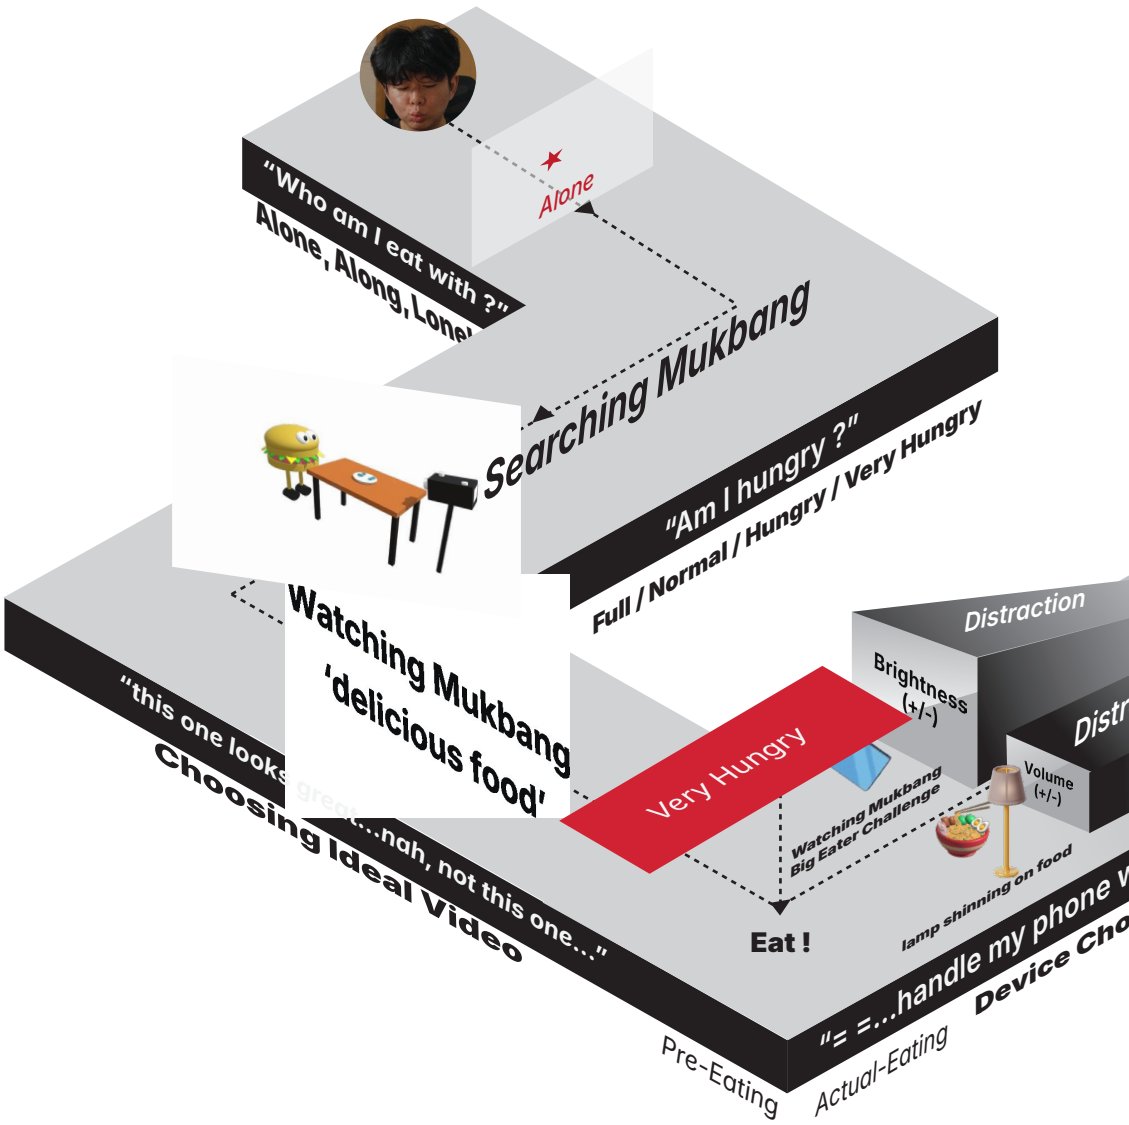

Mukbang 'Big Eater Challenge'

Watching Mukbang can makes me full, increasing my experience of eating, regardless good or bad.

My Final Experience

Watching While Eating

Unsolved findings & potentials

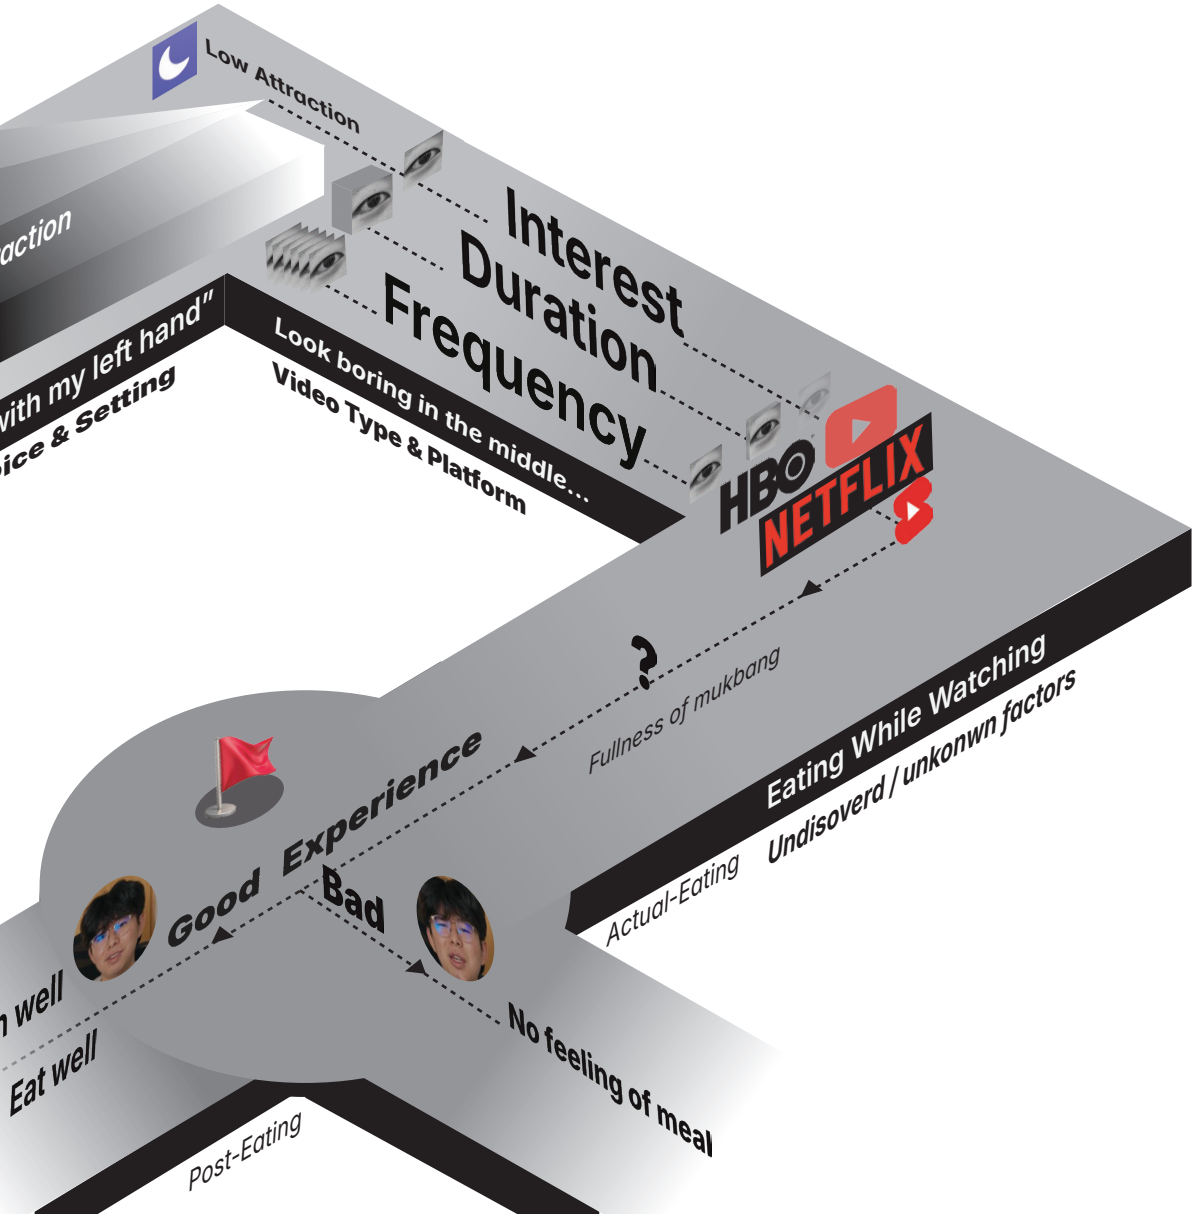

! *When discussing food with friends, I focus entirely on the food itself.*

! *My attention gets diverted to food and conversations with friends...*

! *My overall attention span is smaller than when I'm commonly eating while watching videos.*

? *Is there a combination of settings combo that can make me less focus on the media?*

? *Is there a way that can seamlessly transition to the next video in this platform?*

The message I got ...

What I did not do well

Not all my findings and potentials I encountered were refined,
such as when encounter "lonely eating"

A lot of time was spent on data visualization,
such as video's frequency, interest & duration ranking
but these didn't actually help much with my further prototype.

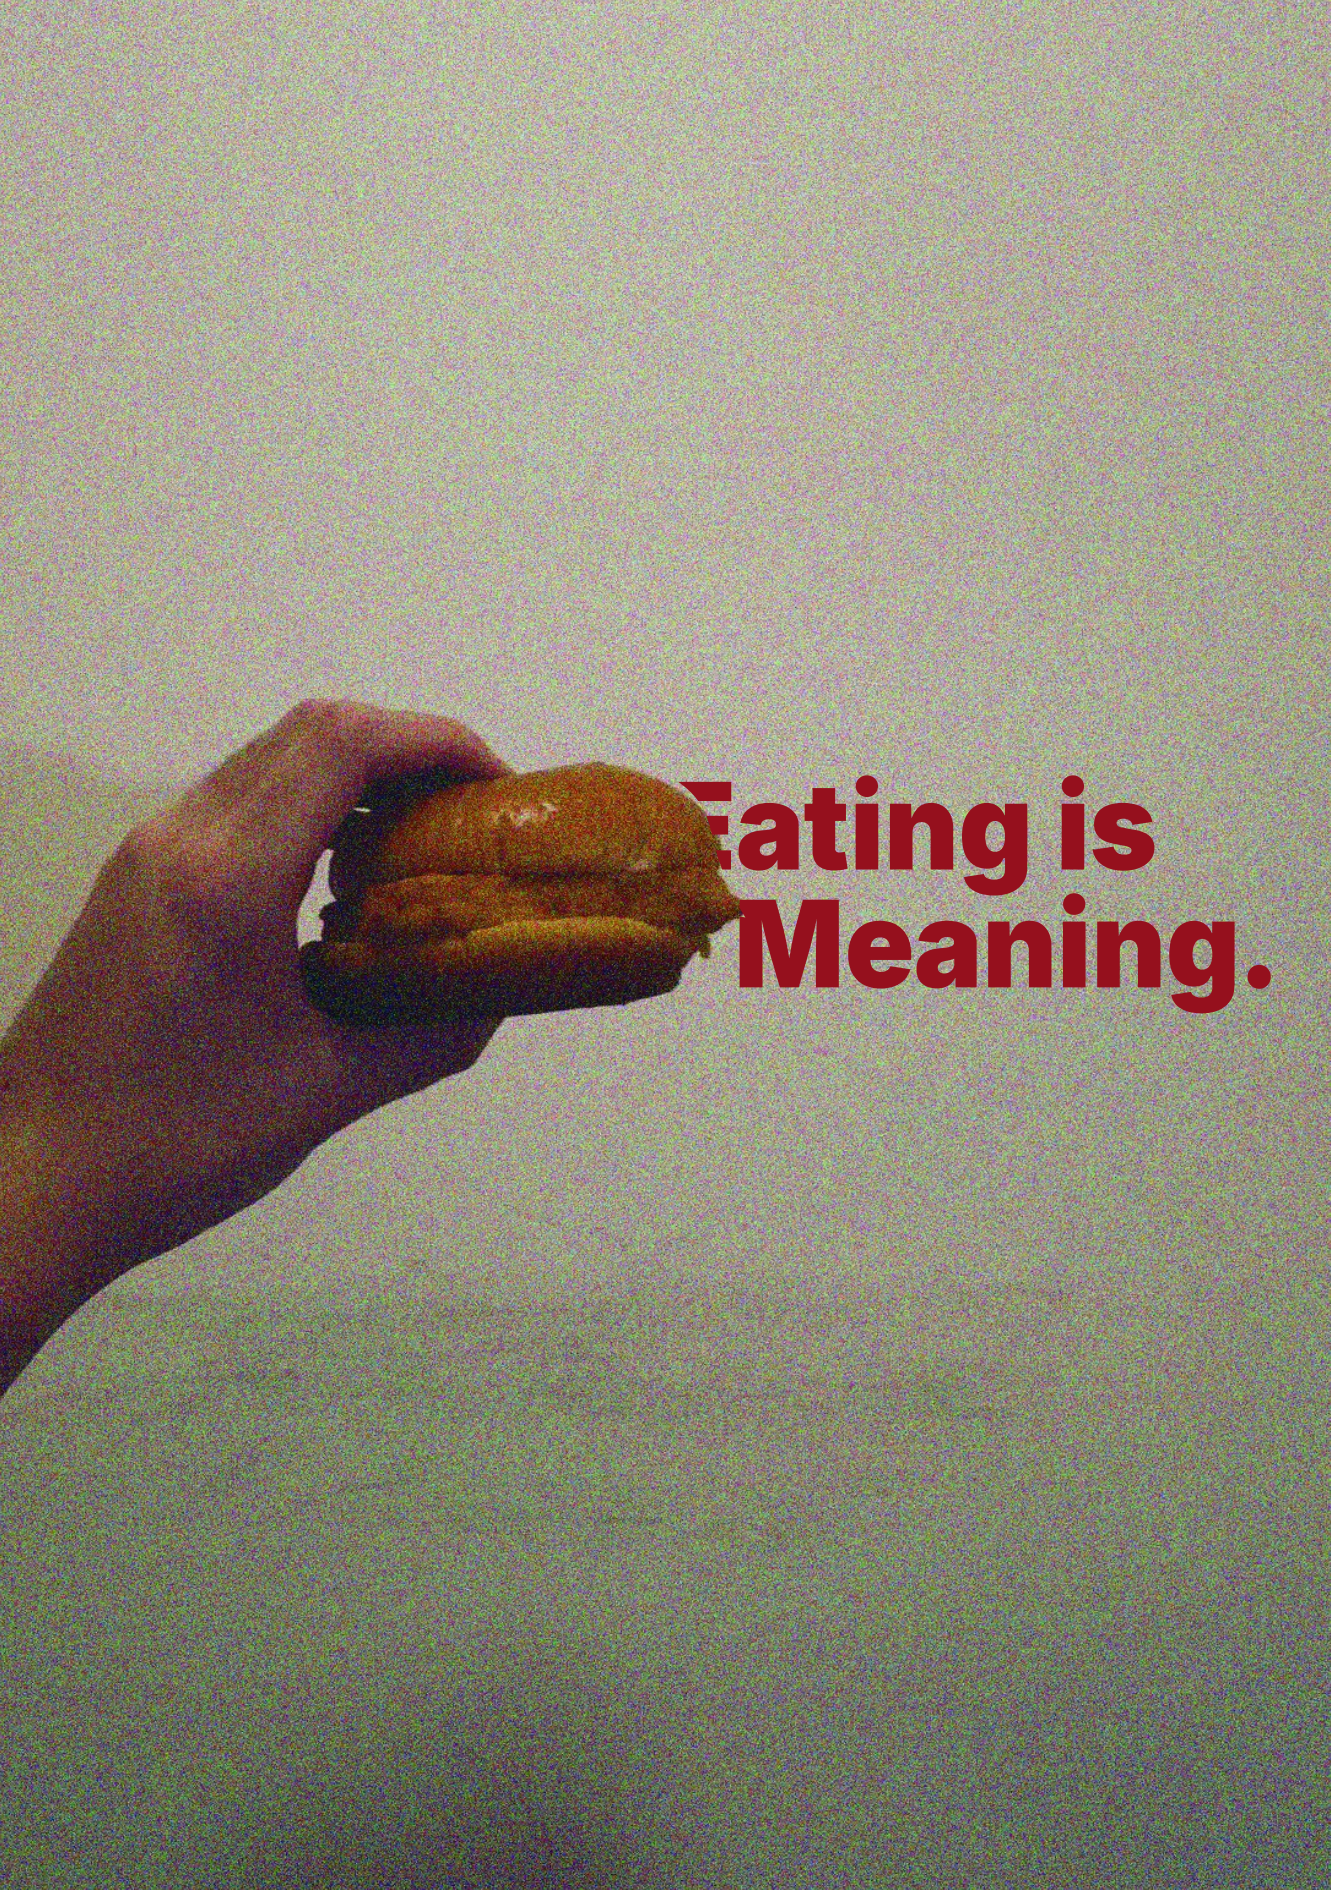

Watching mukbang is deceiving me not to pay much attention to the video.
In a long-term view, if I am bored or just not willing to do this,
I will still keep my eyes on the video.

What I did well

I found some inspiration on one potential:
if the food I watch in a mukbang video is the same as what I eat in real life,
I'll focus more on my own food,
just like when we're eating with others and discussing the food.

Creating 3D experience map is a really cool thing.

For the past three weeks, I've paid close attention to eating,
as if eating mindfully is a meaningful thing,
and the moments of enjoying food are both memorable and interesting.

Eating is
Meaning.
